

# PROFESSIONAL EYE ASSOCIATES AMBULATORY SURGERY CENTER

Dalton, Georgia

*Located on the lower floor of Professional Eye Associates medical facility, the new surgery center's distinctive entrance gives this area of the practice it's own identity.*

When Professional Eye Associates decided to develop its ambulatory surgery center, the unique site provided an opportunity for a dramatic, and functional, planning solution.

The hillside site allowed for a two-story plan with grade-level access on both floors. This allowed the medical office space to expand, and for the surgery center to occupy its own floor, creating an independent entrance and identity for the ASC.

The new space on the upper floor includes new medical office functions and expansion of the optical shop, as well as remodeling in the original building to make functional improvements for patient traffic flow and practice efficiency.

The surgery center includes one fully equipped O.R. and a second (future) O.R., along with related support spaces. Observation windows into the O.R. provide a view to the large screen images of procedures.
