

MEDICAL OFFICE BUILDING

Woodstock, Georgia

Woodstock Professional Building features cast stone elements, elegant glass, and traditional masonry materials.

The Woodstock Specialty Medical Center is planned to obtain maximum efficiency on its 3.4 acre site in Woodstock, Georgia. The topography slopes from Stockwood Road, allowing for a two-story structure with grade-level access on both the upper and lower floors. Parking areas are close to the entrances at both levels.

The main entrance is accented by a curved canopy that provides weather protection at the patient drop-off. Ground floor level includes suites for Imaging and Physical Therapy, Nephrology and Dialysis Center, and Surgery. Medical practices on the upper level include Internal Medicine, Gastroenterology, and a medical office suite shared by several medical specialties.

The building's architectural design uses several contemporary design elements. The exterior is brick, with horizontal accent bands of cast stone. The design incorporates a continuous "ribbon" window system, providing window exposure for the full building perimeter. The exposed structure of the curved metal canopies at the building entrances provides an additional element of design detail.
